# Health Information Exchange

Connect and share...

...Improve care.

Our eHealth solutions, including our Health Information Exchange, enable healthcare providers to seamlessly connect, store and manage clinical data from hospitals, physician offices, pharmacies, labs and other sources.

By improving the flow of information, our HIE helps you increase the quality of patient care and access while reducing costs.
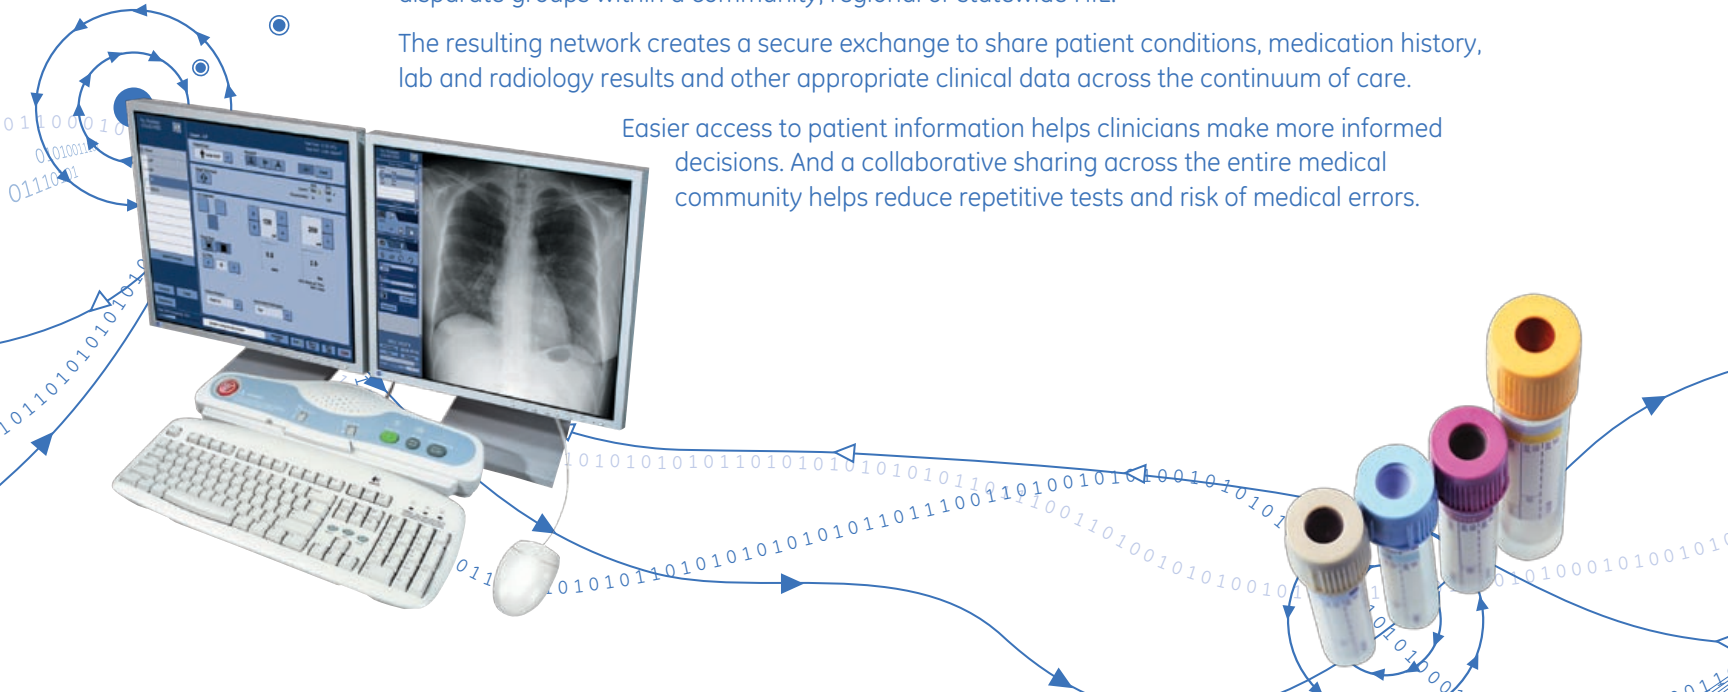

Tear down silos.

And build a foundation for information exchange.

Patient data in EMRs is often trapped in silos, accessible only by a practice or medical group. Our HIE works with EMR systems, enabling full collaboration and interoperability among disparate groups within a community, regional or statewide HIE.

The resulting network creates a secure exchange to share patient conditions, medication history, lab and radiology results and other appropriate clinical data across the continuum of care.

Easier access to patient information helps clinicians make more informed decisions. And a collaborative sharing across the entire medical community helps reduce repetitive tests and risk of medical errors.

Get ready for ARRA. ASAP.

Standards-based connectivity you can use.

GE's eHealth solutions provide flexible, advanced architecture and deep knowledge of interoperability standards – such as HITSP and IHE – can help providers prepare for ARRA standards to qualify for stimulus dollars.

"Since 2007, our Clinical Community Information Exchange has been a cornerstone of our EHR strategy by enhancing patient care across our integrated network. Now we must continue to expand this capability, not only to achieve a more comprehensive patient record for better care, but to demonstrate meaningful use," says Joel Vengco, Director IT, Boston Medical Center.

Tailored to your needs.

From a strong, stable partner.

eHealth solutions are offered on an affordable subscription basis and can be tailored to fit your needs. So you can implement only the services you need, such as lab results, and add other options as your needs grow.

Our HIE is hosted in the GE Healthcare data center, which hosts services for 500 customers nationwide who perform over 25 million transactions each month. A provider hosted option is also available.

With our Centricity portfolio of electronic medical records, enterprise systems, clinical repositories and patient solutions, GE Healthcare is one of the only companies to offer a full range of technology for global healthcare IT.
